

Viewing AWS S3 Bucket through management console

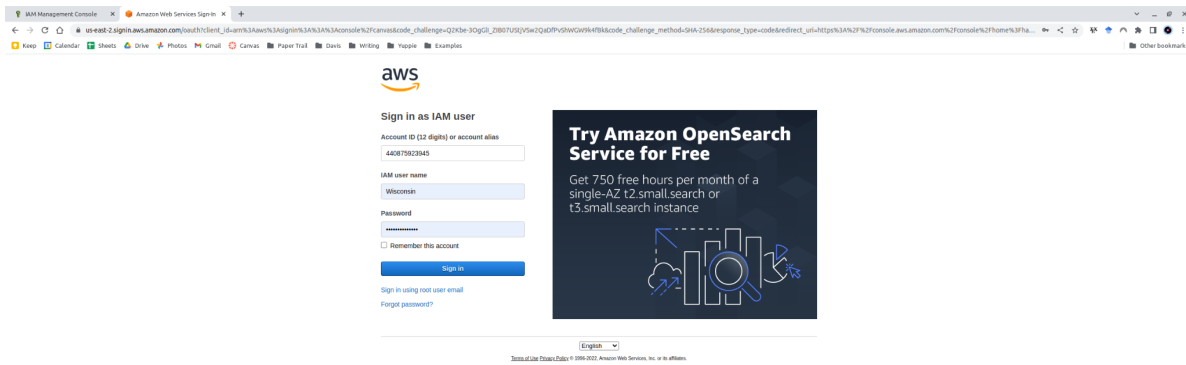

IAM user credentials

Account ID: 440875923945

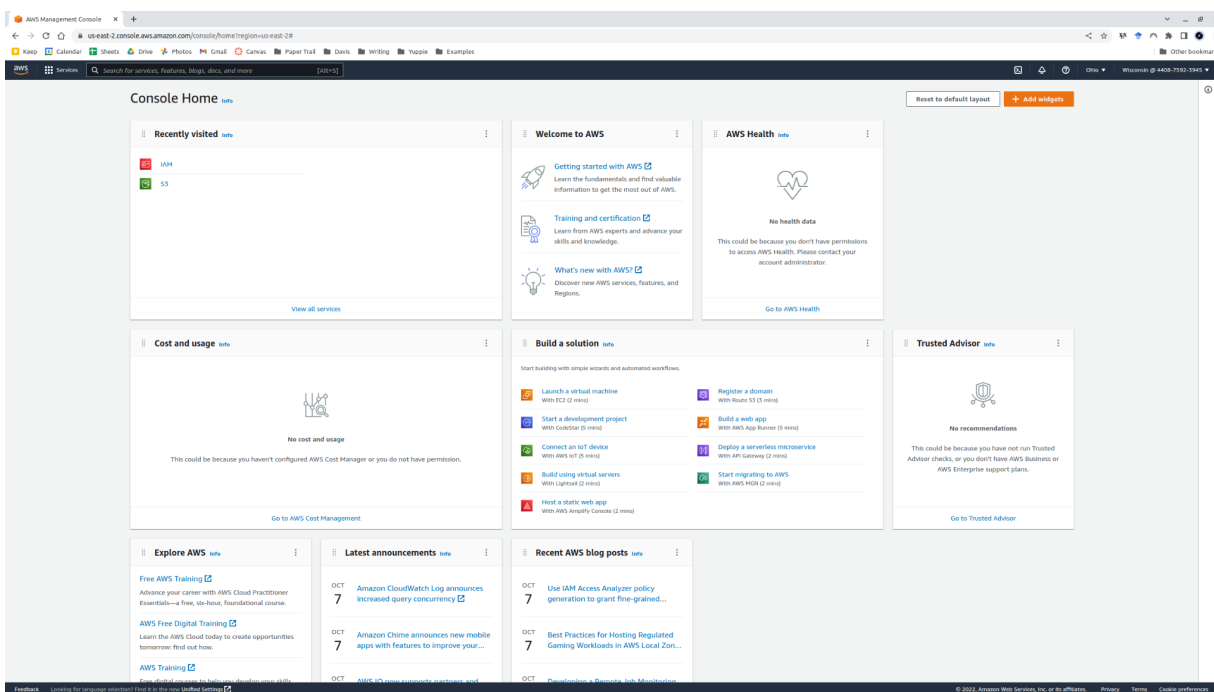

Username: Wisconsin

Password: Wisconsin22REU

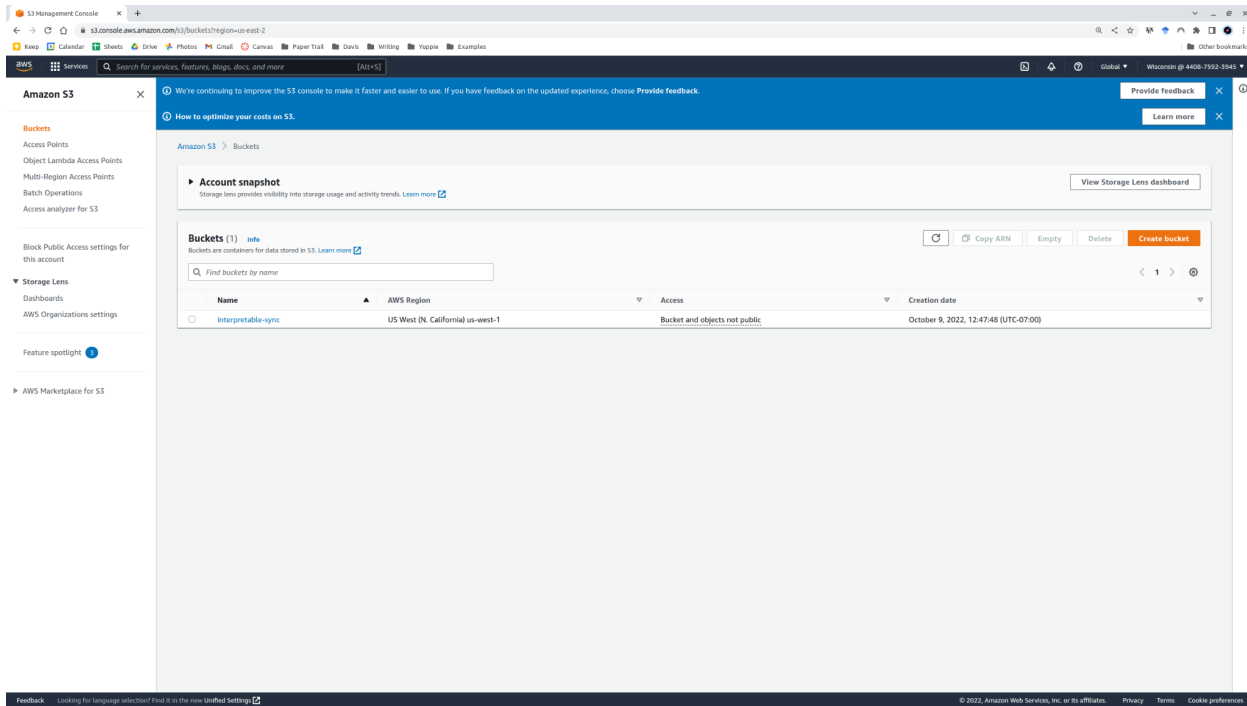

Step 1: Log in to the IAM account. The IAM account allows users to access the S3 bucket without root user permissions and credentials.

Step 2: Once you log in you can search for “S3” in the search bar. Select it as the service of interest.

Step 3: After selecting “S3” you will find a list of buckets. We will be using the bucket “interpretable-sync” to store all of our data.

Step 4: You can click on “interpretable-sync” and you will be loaded to a page essentially corresponding to a directory of files stored in the bucket.
